VINOTH KUMAR PARASURAMAN

Project Management (PMP) | Product Care & PLM | NPD/NPI | Electrical Engineering Background

+91 9176575668 | p.vinothkumar24@gmail.com | linkedin.com/in/vinoth-kumar-p-51ab11135

PROFESSIONAL SUMMARY

PMP-certified Project Management professional with 13+ years leading engineering-change, product care, and product lifecycle initiatives across multinational manufacturers. Skilled in managing scope, schedule, risk, and cross-functional stakeholders — R&D, sourcing, manufacturing, quality, and suppliers — through the full change and product lifecycle process. Builds on a strong PLM, Product Care, and NPD/NPI foundation, underpinned by an Electrical Engineering background that grounds project delivery in technical credibility. PMP formalizes competencies developed through this hands-on experience.

CORE COMPETENCIES

Project Management: Cross-Functional Project Coordination • Stakeholder & Communication Management • Scope & Change Control • Risk Assessment & Mitigation • Schedule & Milestone Tracking • Cost & Procurement Coordination • PMP-Aligned Delivery

Product Care & PLM: Product Lifecycle Management (PLM) • Sustaining Engineering • Engineering Change Management (ECO/ECR) • Obsolescence & Alternate Component Management • BOM & Configuration Management • Technical Documentation

NPD/NPI: New Product Introduction (NPI) Support • Component Qualification • Supplier Readiness Planning • Design-to-Cost Evaluation • Change Control Board (CCB) Coordination

Electrical Engineering Foundation: Electrical Schematics Review • Electrical harware • Technical/Electrical Calculations • Electrical & Electronic Component Engineering •

PROFESSIONAL EXPERIENCE

Assistant Manager – Project & Product Lifecycle Management | Cytiva HyClone Lifesciences (Genpact), Bangalore

August 2024 – Present

- Lead end-to-end management of Engineering Change Orders (ECO) and Change Requests (ECR) — defining scope, coordinating cross-functional stakeholders across R&D, sourcing, manufacturing, quality, and suppliers, and tracking each change through to closure against quality and regulatory requirements.
- Chair cross-functional change review meetings to evaluate technical, commercial, and operational impact of proposed changes, driving stakeholder alignment and timely decisions.
- Conduct lifecycle risk assessments and build mitigation strategies to proactively manage obsolescence risk and protect production continuity.
- Own product lifecycle management and product care activities for electrical and electronic components — covering sustaining engineering, product updates, and end-of-life management.
- Review electrical schematics and perform technical/electrical testing for drives/VFD and PLC-related components to validate and implement minor design updates through the ECO process.
- Support New Product Introduction (NPI) programs by defining approved component strategies and supplier readiness plans.
- Analyze procurement and product cost data to identify opportunities for improved margins and operational efficiency.

Senior Engineer – Product Lifecycle & Cost Management | ePropelled, Chennai

January 2024 – August 2024

- Coordinated ECO/ECR and BOM release activity end-to-end, aligning R&D and supplier teams on component qualification scope, timelines, and approvals.
- Led cross-functional change review meetings to assess technical, commercial, and operational impact of proposed changes.
- Conducted lifecycle risk assessments to identify obsolescence exposure ahead of production impact and defined mitigation plans, while delivering product care through component selection and alternate-part qualification (performance, reliability, availability, total cost of ownership).
- Supported NPI programs by defining approved component strategies and supplier readiness plans.
- Reviewed electrical schematics and performed technical/electrical calculations for drives/VFD and PLC-related components, implementing minor design changes through the ECO process.

Lead Engineer – WWOPS | Applied Materials (via HCL Technologies Ltd.), Bangalore
May 2022 – January 2024

- Coordinated Change Control Board (CCB) meetings to prioritize, evaluate, and approve Engineering Change Requests (ECRs), aligning stakeholders across engineering, manufacturing, and quality on cost, risk, and schedule impact.
- Reviewed ECRs for feasibility, cost, and risk, ensuring alignment with project requirements before approval.
- Delivered product care through alternate-component sourcing to resolve part shortages, demand gaps, obsolescence, and rejections — recognized with an Excellence Award from Applied Materials.
- Executed ECOs across B1–B3 level BOMs for electrical and mechanical parts, and identified EOL/NRND status, obsolescence, and part classification using the CIS database, incorporating environmental compliance considerations.
- Evaluated alternate parts using Form-Fit-Function (FFF) analysis and coordinated with design/manufacturing engineers and manufacturers across regions; negotiated with suppliers on lead-time, cost, and quality.
- Reviewed electrical schematics and performed technical/electrical calculations for drives/VFD and PLC-related components to support minor design changes implemented via ECO.

Senior Engineer – R&D | ESAB India Ltd., Chennai
December 2015 – May 2022

- Managed ECO and Manufacturing Change Order (MCO) creation, review, and routing through all approval stages, coordinating with engineering teams and EMS partners on component selection, alternate-part suggestions, and obsolescence/End-of-Life evaluations.
- Delivered ongoing product care through BOM cleansing, component database and Approved Manufacturer List (AML) ownership, and resolution of AML discrepancies with EMS partners — supporting sustained product documentation accuracy.
- Analyzed Product Change Notifications (PCNs) and evaluated process changes via Form-Fit-Function (FFF) analysis, incorporating RoHS compliance data into part records.
- Reviewed electrical schematics and performed technical/electrical calculations for drives/VFD and PLC-related components, implementing minor design updates through the ECO process.

Engineer – Global Sourcing & Logistics | Prolec GE, Chennai
April 2013 – December 2015

- Coordinated the full procurement cycle — sourcing deals, contracts, delivery, and quality — balancing cost, schedule, and supplier performance to meet project requirements.
- Searched and introduced global sourcing alternatives to increase competitiveness as part of an NPI process, coordinating with cross-functional teams on supplier evaluation.
- Analyzed and selected suppliers based on quality and competitive pricing; negotiated lead-time, cost, and quality terms.
- Performed spend analysis by commodity to identify cost-saving opportunities and strengthen vendor management.
- Implemented advanced manufacturing processes and Standard Operating Procedures (SOPs) for the Dry Type Transformers plant.
- Monitored material shortages and coordinated orders to meet production schedules; prepared weekly inventory audits.

KEY PROJECTS

- VFD Obsoletion – Electrical Hardware change lead
- PLC changes – Electrical hardware change team
- Arena PLM integration with product details - lead
- Q1–Q4 Risk Shortage Resolution — Component engineering & change implementation lead
- Warrior 750i (New Product Introduction) — Component engineering Lead
- PS0 Remote & Cooler / SPS Reduction — Alternate Part & Change Execution

CERTIFICATIONS

- Project Management Professional (PMP) — Certification Number: 4448301 dt 03.07.26

EDUCATION

- Bachelor of Engineering, Electrical and Electronics Engineering — Tagore Engineering College, 2012 (First Class, CGPA 7.18)
- Higher Secondary Certificate (HSC) — J.G.N Higher Secondary School, 2008

SOFTWARE & TOOLS

PLM Systems: Teamcenter, Arena, Magic • Design: AutoCAD, EPLAN • Microsoft Office • Agile
